

No central column
built into tripod

When extra height needed
a central column is included

Packs up slim
to be easy to carry/pack

Goes down low
without needing an adaptor

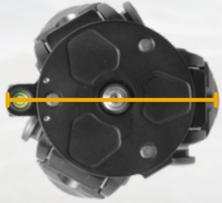

ALTA PRO 3X

With no built in central column, this tripod offers a great blend of portability and stability

ALTA PRO 3X

The **Alta Pro 3X 304CLBPS** is designed for photographers who need maximum stability in a more portable design. Perfect for those who travel further for their photoshoots, but work with heavy equipment such as telephoto lenses in wildlife photography.

With no built in central column, the tripod can fold to a diameter of just 8.5cm.

This then folds down to just 61cm and weighs 1685g, making it easy to pack and carry.

The 30mm legs are then topped with a pro low profile ball head that is Arca compatible with a dual axis.

Overall, this is an outstanding choice when you need a balance of portability and stability, and that's before you add in a host of other features.

CNC machined | separate centre column | retractable spiked feet | set low angle in seconds | easy clean leg locks | etc
